

PPIUCD Pre-insertion Screening

In preparation for insertion of the IUCD, confirm the following information about the woman and her clinical situation:

Ask the woman whether she still desires the IUCD for Immediate PFP

No

Yes

Review her antenatal record and be certain that:

- her antenatal screening shows that an IUCD is an appropriate method for her
- she has had FP counseling while not in active labor **and** there is evidence of consent in her chart **OR**
- she is being counseled in the post partum period

No

Yes

No

Yes

No

Yes

Review the course of her labor and delivery and ensure that none of the following conditions are present:

If planning an *immediate post placental insertion*, check whether any of the following conditions are present:

- Chorioamnionitis (during labor)
- More than 18 hours from rupture of membranes to delivery of baby
- Unresolved postpartum hemorrhage

Yes

No

Yes

No

Yes

No

If planning a *immediate postpartum insertion*, check whether any of the following conditions are present:

- Puerperal sepsis
- Postpartum endometritis/metritis
- Continued excessive postpartum bleeding
- Extensive genital trauma where the repair would be disrupted by immediate postpartum placement of an IUCD

Yes

No

Yes

No

Yes

No

Yes

No

Confirm that sterile instruments are available*

No

Yes

Confirm that IUCDs are available and accessible on the labor ward*

No

Yes

If **ANY** box is checked in this column, defer insertion of the IUCD and provide the woman with information about another method.

If **ALL** the boxes in this column are ticked, then proceed with IUCD insertion.

*If correct instruments or sterile IUCDs are not available, proceed with IUCD insertion if they become available within an appropriate time period.
